## How to Keep the Dust Bins on the Footpath/Road Corners

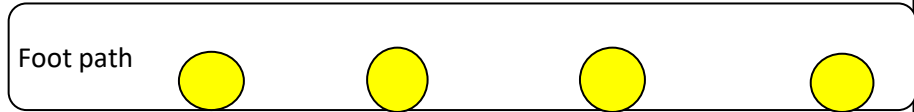

Posting expires:  
 Basic knowledge  
 Problem case examples  
**Improvement case examples**

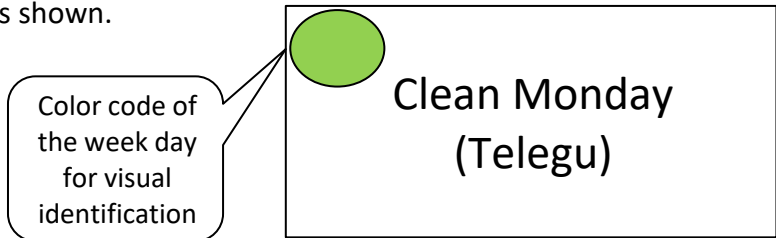

The drums are kept on the road for the collection of trash and dusts that are accumulated after sweeping the roads and the footpath. There are no fixed place to keep the drums or a specified particular day to empty the trash as a result drums are found at irregular intervals and at times overfilled.

To avoid such problems two systems are to be followed:

1: Have a marked place to keep the drum. On the footpath a circle of 1ft. diameter can be drawn and filled with yellow enamel paint as shown in the sketch. The distance between adjacent circles will be at the convenience of the user. Drums after emptying will be kept only on those circles.

2: For emptying the drums at regular intervals the drums located at a particular road can be checked and emptied on a specified day of the week. For example the drums on the road in front of the canteen can be checked and emptied on each monday. To identify that self adhesive stickers of size 6 inches by 6 inches can be made and pasted on the drum as shown.
